

Design Document Generator

Access the application here:

<https://design-document-converter.azurewebsites.net/>

1.0 How to Generate Design Document using the app

This section explains how to generate a Design Document using the application. The application converts a Design Document presentation slide deck (**.pptx**) into a comprehensive and formal Microsoft Word Solution Design Document (**.docx**).

Users are required to upload the PowerPoint file along with the client's logo image. The client's logo ensures that the generated Design Document follows the original template, where the client's branding (in addition to the **Enfrasys** logo) is displayed on the cover page and in the document header.

Here are the supported files for the upload:

File Type	Supported Format
Input – Design Document Presentation	<i>.pptx</i>
Input – Client Logo	<i>.png, .jpg, .jpeg,</i>
Output – Generated Design Document	<i>.docx</i>

Important notes to consider when preparing the PPTX slides before uploading, to ensure the best possible output:

- Ensure that all **unused** or **hidden** slides are removed, and that all remaining slides are visible.
- Arrange the slides in the **correct presentation order** before uploading.
- Adding **Presenter Notes** is highly recommended, as it helps the AI better understand the context and intent of each slide.
- If any **architecture or flow diagrams** are drawn directly using PowerPoint shapes within the *.pptx* slides, take a screenshot of the diagram and insert it as an image into the slide instead.

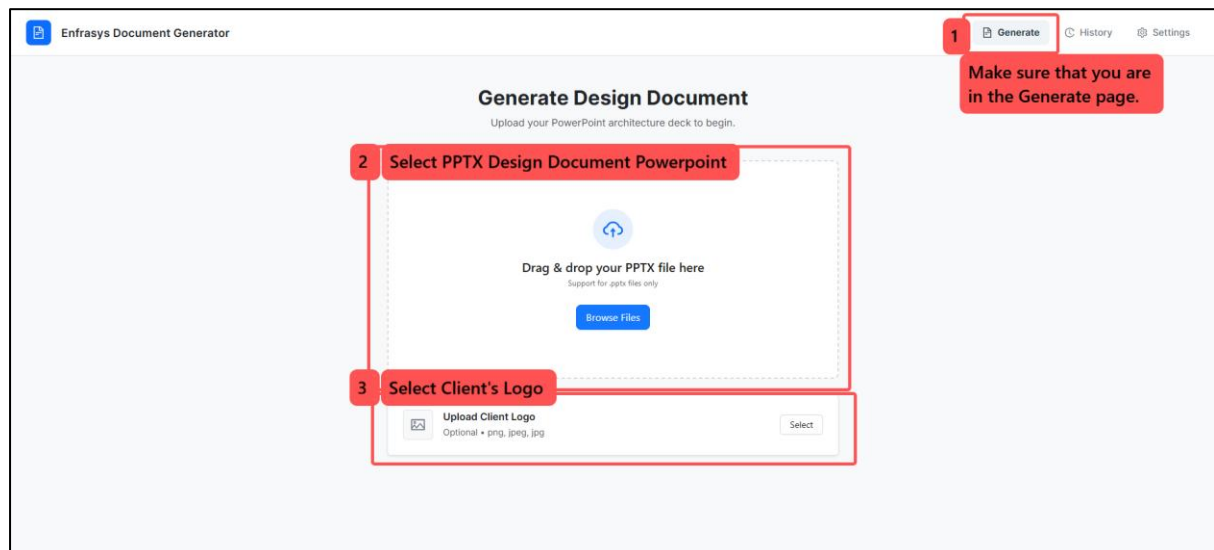

Follow the steps below to generate your Design Document.

Step 1: Upload the PPTX Design Document and Client's Logo

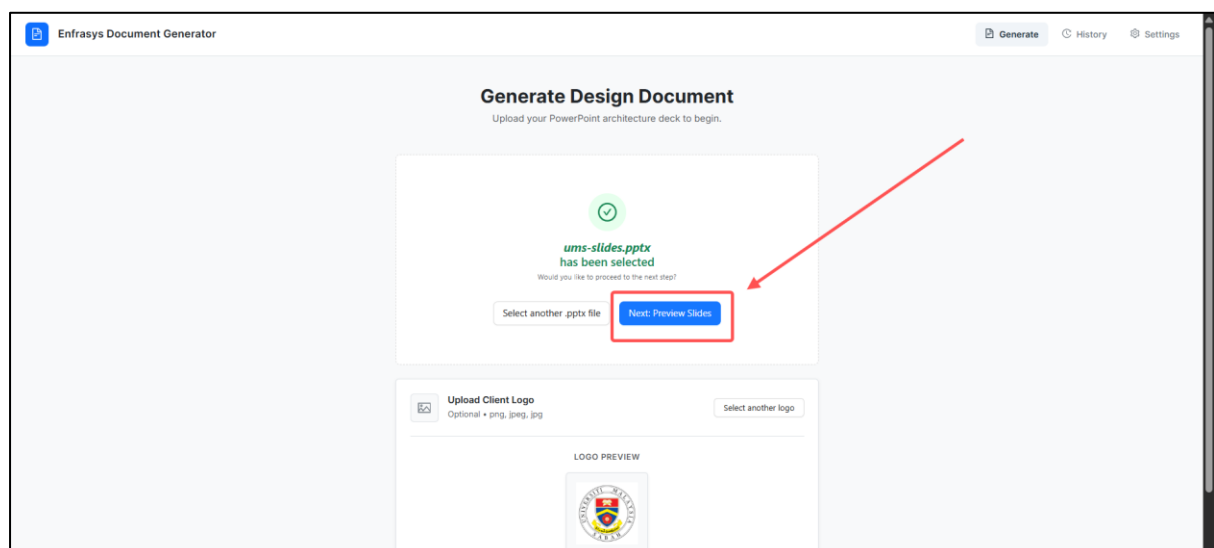

Upon entering the application, you will be directed to the Generate page.

Follow the steps below to upload the required files:

1. In the **Drag & drop your PPTX file here area**, click **Browse Files** or drag and drop your **Design Document (.pptx)** into the uploaded area.
2. In the **Upload Client Logo** section, click **Select** to choose the client's logo image. Supported formats are *.png*, *.jpg*, and *.jpeg*.

Once both the PowerPoint file and client logo have been uploaded successfully, click **Next: Preview Slides** to proceed to the next step.

Step 2: Preview Slides and Add AI Insights

After clicking Next: Preview Slides, you will be redirected to the Slide Preview page. This page displays a preview of all extracted slides along with their corresponding presenter notes.

Review each slide and its presenter notes to ensure that all content has been extracted correctly before proceeding.

Slide 7 Preview

Access Design (Conditional Access)

No.	Conditional Access
0001	Configure Policy in Conditional Access to include Power BI Service, Azure Data Explorer, Azure SQL Database, and Azure Storage
0002	Include UMS user inside Conditional Access policy
0003	UMS users go through additional verification, MFA, to reduce unexpected login prompts
0004	Users able to access Microsoft Fabric's environment

Based on the assessment, UMS account is not eligible for Conditional Access. Therefore, MFA has been enforced at the tenant level.

Presenter Notes

Presenter Notes (Edit to add AI Context):

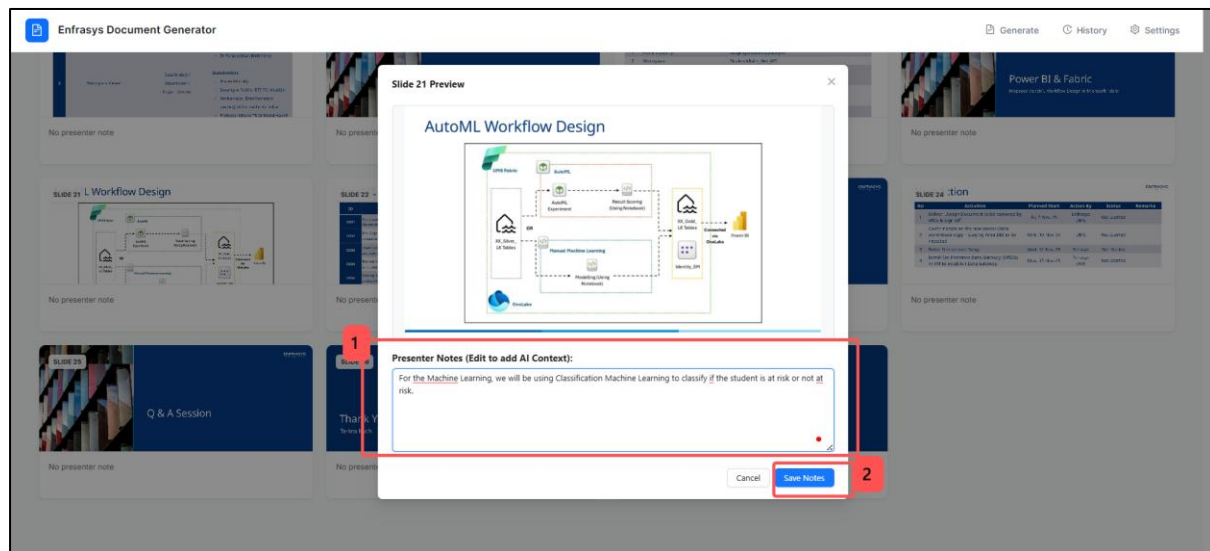

There will be some limitations to implement private link, so we opted out for this for future implementation (CA) Explain the reasoning Then go through the table:

[Cancel](#) [Save Notes](#)

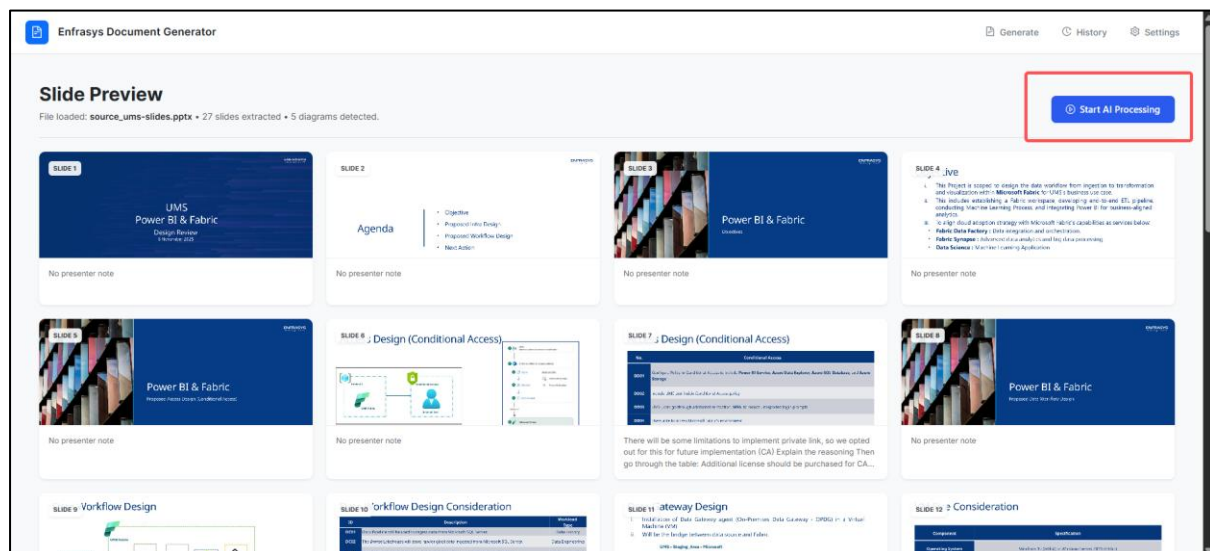

You can also click on any individual slide to **add additional context** or **instructions for the AI**, especially for slides that contain diagrams, images, or minimal text.

To add or edit AI context:

1. Click on the slide you would like to add context to.
2. Enter the additional context or instructions in the **Presenter Notes (Edit to add AI Context)** field.
3. Click **Save Notes** to apply the changes

After reviewing all slides and adding AI context where necessary, proceed to the next step by clicking **Start AI Processing**.

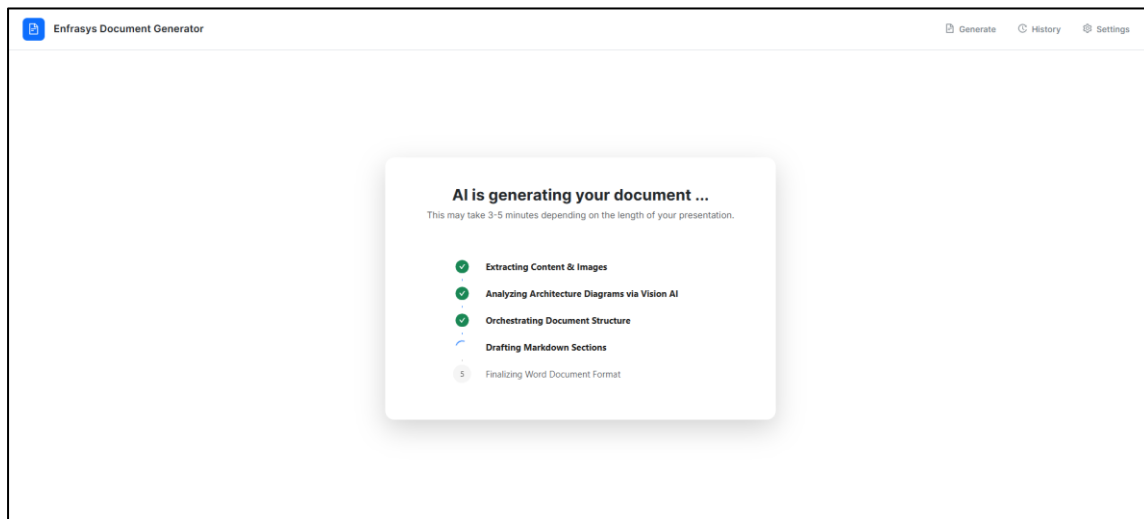

Step 3: Start AI Processing

After clicking **Start AI Processing**, you will be redirected to the **Processing Page**. This page displays a progress indicator showing the AI's current processing status while the document is being generated.

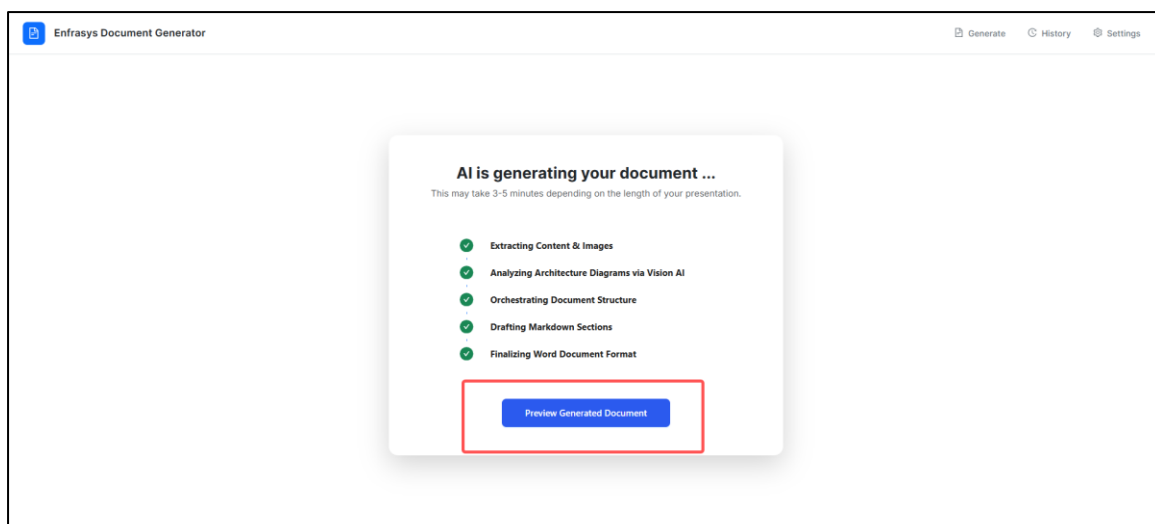

The processing typically involves the following stages:

- Extracting Content and Images
- Analyzing Architecture Diagrams via Vision AI.
- Orchestrating Document Structure
- Drafting Markdown Sections
- Finalizing Word Document Format.

Depending on the length and complexity of your presentation, this process may take approximately **3-5 minutes** to complete.

Once the processing is complete, click **Preview Generated Document** to proceed to the next step.

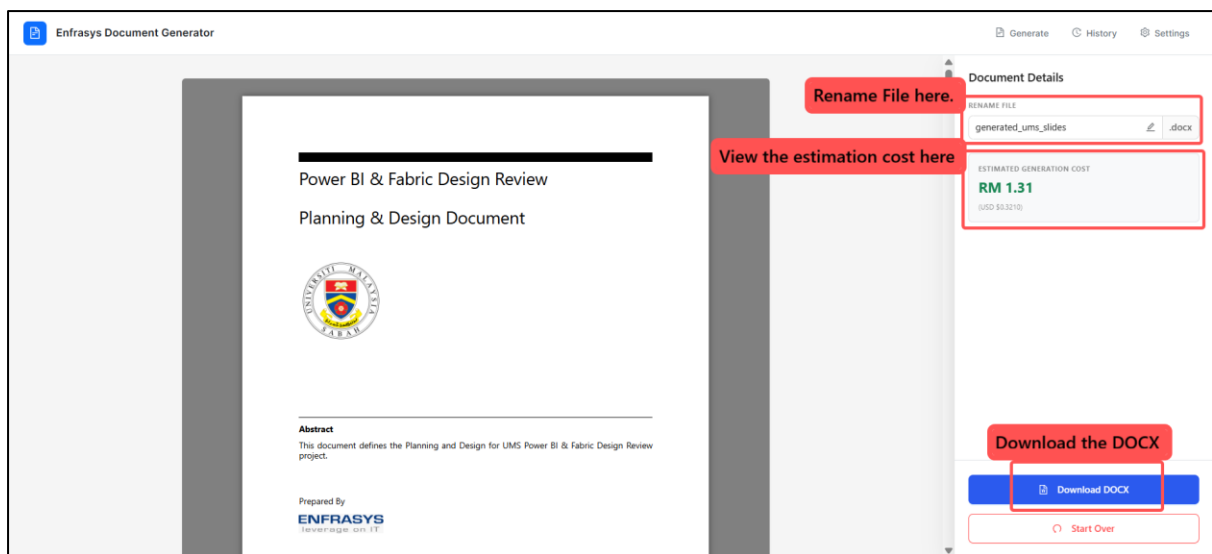

Step 4: Preview, Rename, and Download the Generated Document

After clicking **Preview Generated Document**, you will be redirected to the **Review** page.

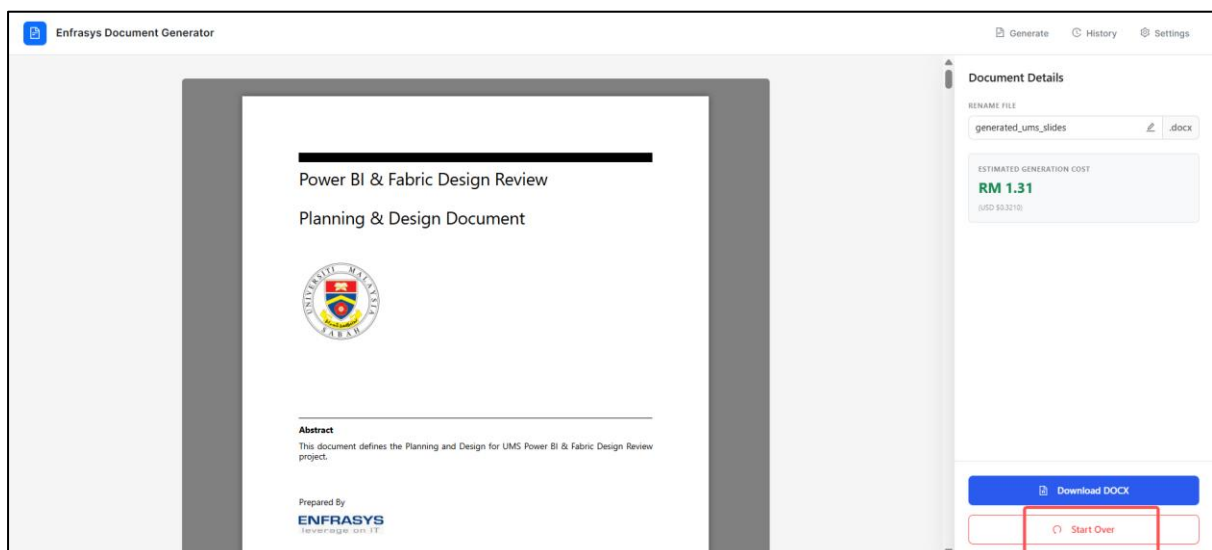

On this page, you can:

- **Preview** the generated document content.
- **Rename** the generated file name before downloading.
- **View** the estimated generation cost, which is dynamically calculated based on the pricing values configured in the **Settings** page.
- **Download** the generated Design Document in .docx format.

Note: The document preview shown in the **Review** page is rendered using LibreOffice for display purposes only. The actual download **.docx** file will follow the full Enfrasys template design and formatting.

If you would like to generate a new document, click **Start Over** located at the bottom of the sidebar. This will return you to the **Generate** page to begin a new generation process.

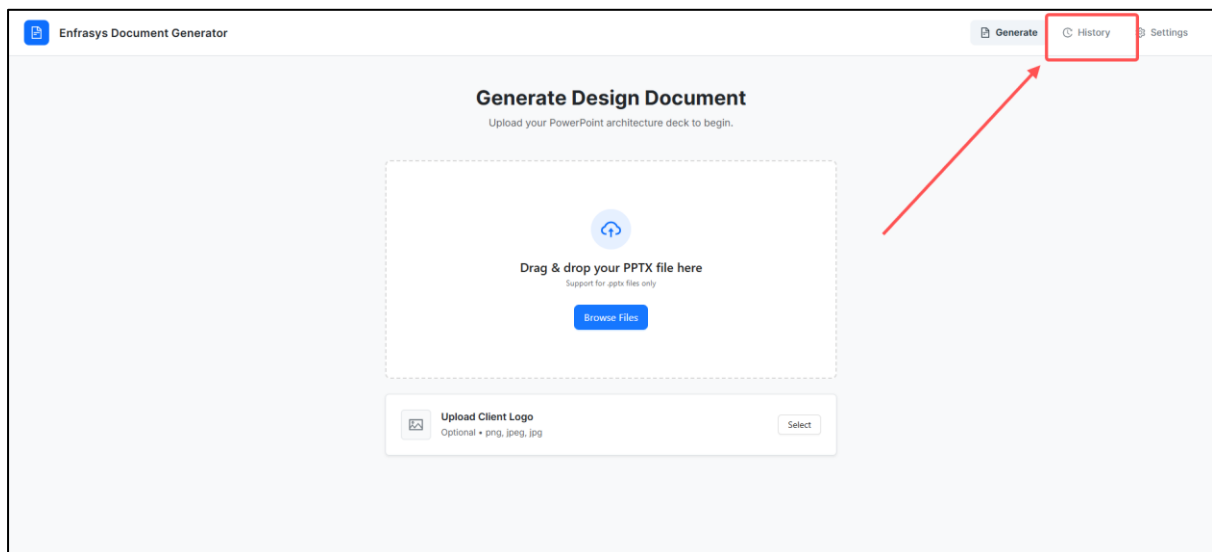

2.0 Managing Generation History

This section explains how to view, download and delete previously generated documents from the History page. Each generation task is tracked in Cosmos DB (metadata) and its output file is stored in Blob Storage (the actual document).

Follow the steps below to manage your generation history.

Step 1: Navigate to the history page

From the application header, click **History** in the upper-right corner of the page. You will be redirected to the **Generation History** page.

The **Generation History** page displays a list of previously generated documents. The table includes information such as the document name, document type, generation date and time, generation status, and estimated generation cost.

Step 2: View Previously Generated Document

Once a document has been generated, its metadata is stored in **Cosmos DB**, while the generated document is stored in **Azure Blob Storage**.

To view a previously generated document, click the **three-dot menu** on the right side of the corresponding row and select **View Document**.

The document will open in the preview page, where you can review the generated content before downloading it.

Power BI & Fabric Design Review

Planning & Design Document

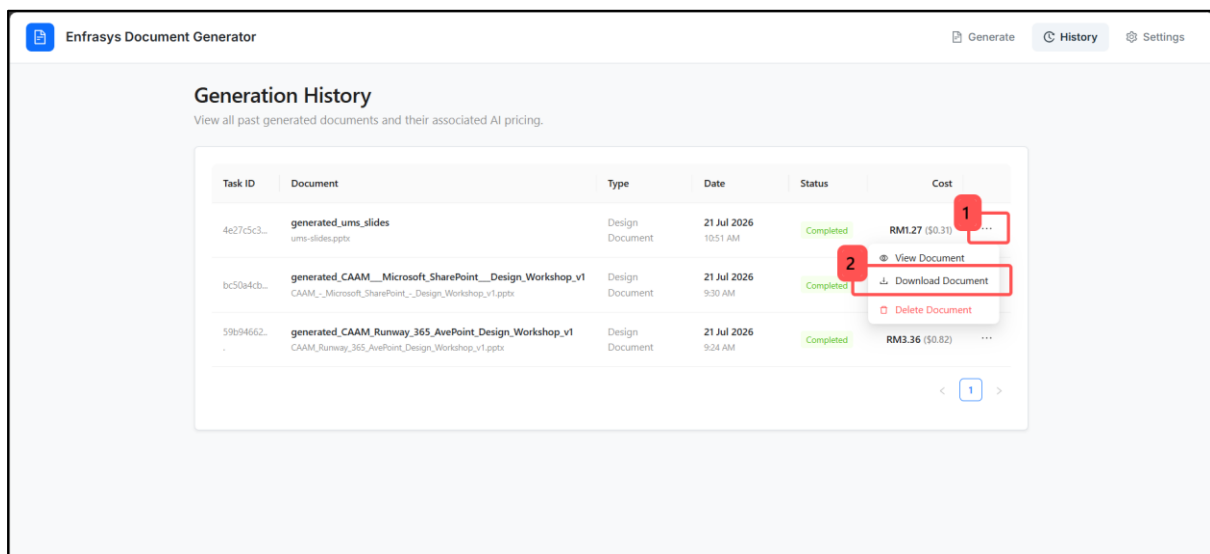

Abstract

This document defines the Planning and Design for UMS Power BI & Fabric Design Review project.

Step 3: Download Previously Generated Document

Previously generated documents can be downloaded either from the document preview page or directly from the **Generation History** page.

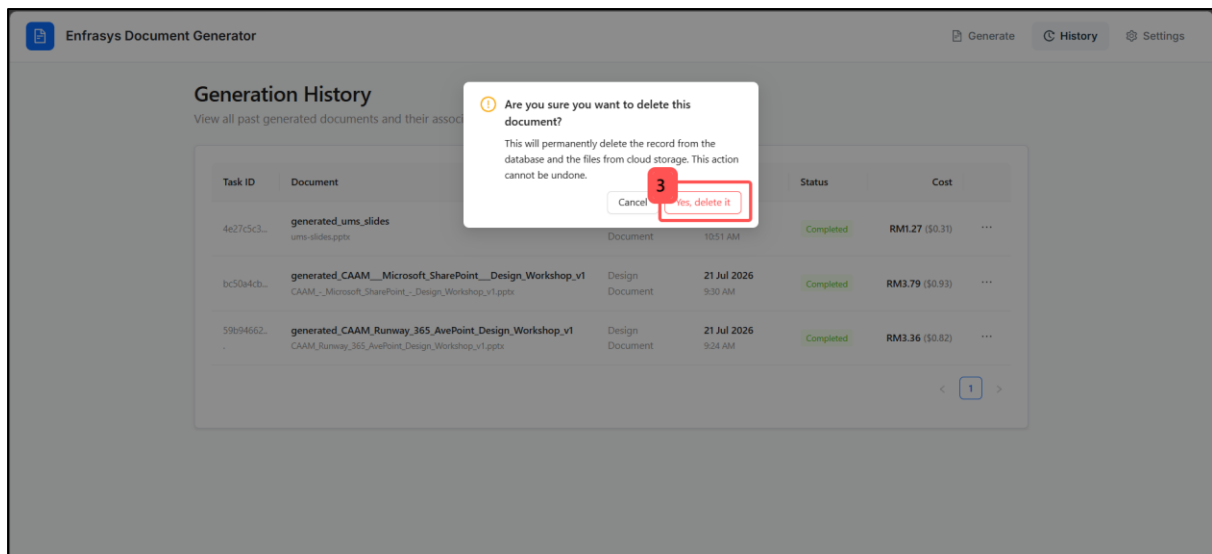

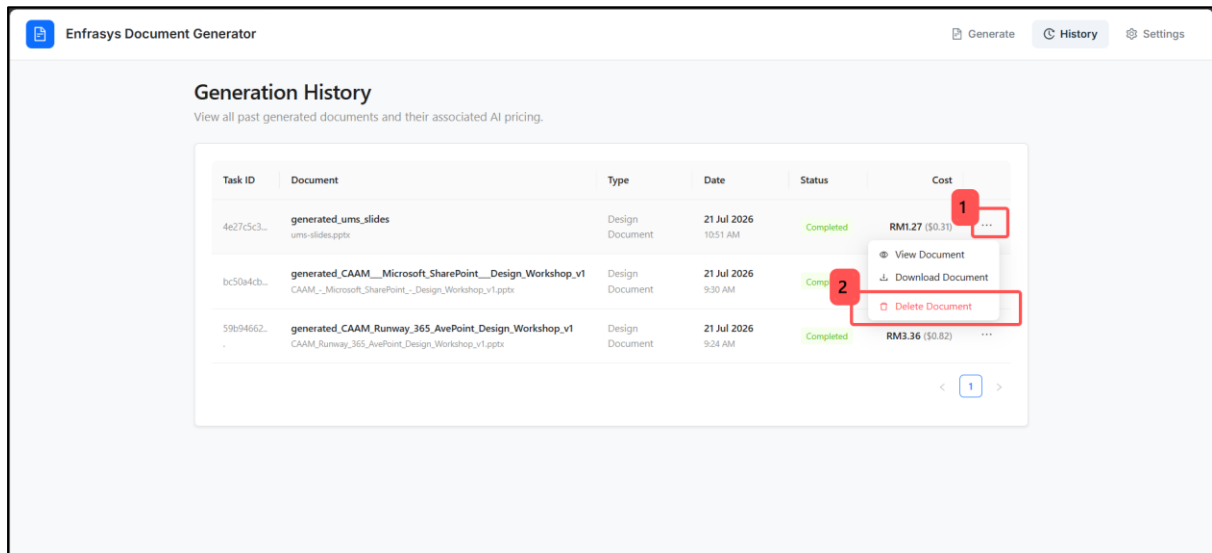

Follow the steps below to download a previously generated document.

Step 4: Delete Previously Generated Document

If a generated document is no longer required, you can delete it from the **Generation History** page.

Deleting a document removes its metadata from **Cosmos DB** and permanently removes the associated file from **Azure Blob Storage**.

3.0 Configuring AI Pricing Settings

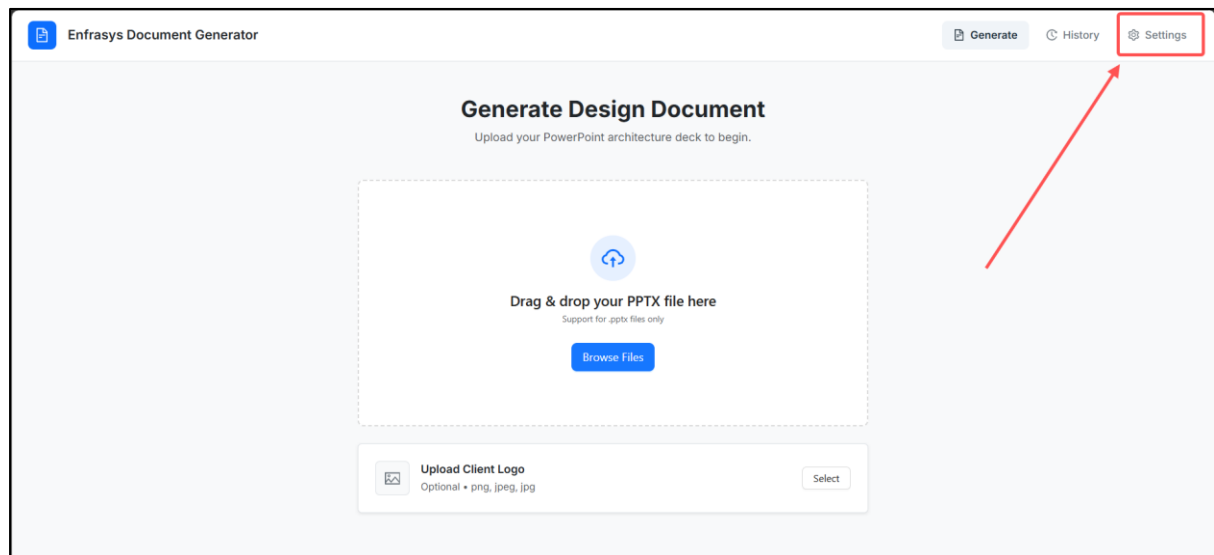

This section explains how to configure the AI service pricing rates used to estimate the generation cost of each design document.

The Settings page allows you to configure the currency exchange rate, AI model pricing (Vision and LLM), and **Azure Content Understanding** pricing. Any changes made will be reflected immediately in the cost estimates displayed on both the **Review page** and the **Settings page**.

Follow the steps below to configure your AI pricing settings.

Step 1: Navigate to the Settings Page

From the application header, click Settings in the upper-right corner of the page. You will be redirected to the Settings page.

The **Settings** page contains three configuration sections:

- **Currency Conversion**
- **AI Model Pricing (USD)**
- **Azure Service Pricing (USD)**

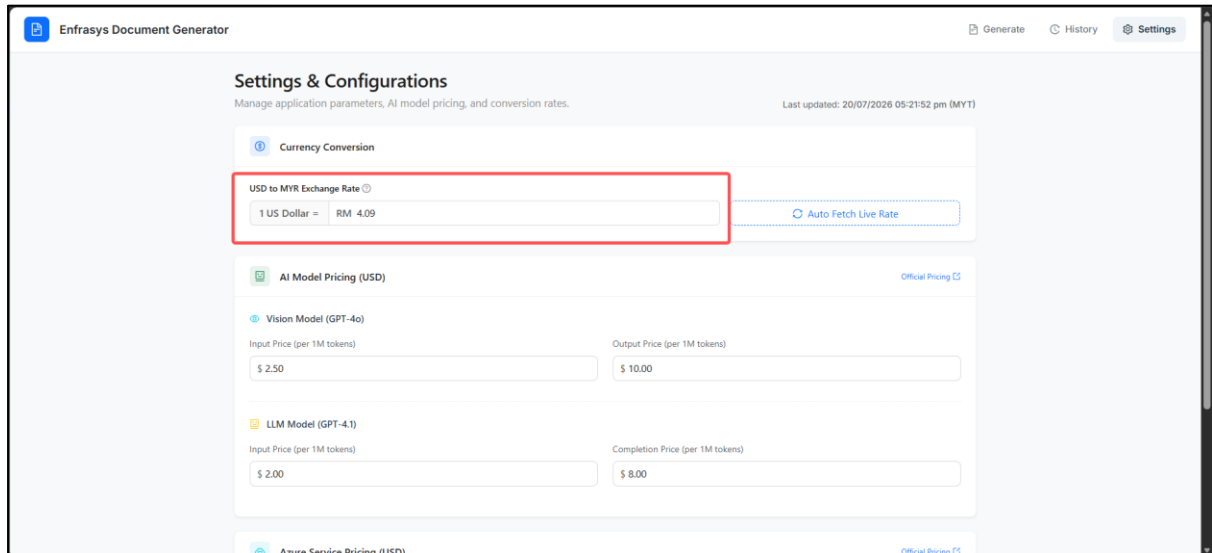

These sections allow you to configure the pricing parameters used for document generation cost estimation.

The screenshot displays the 'Settings & Configurations' page of the Enfrasys Document Generator. The page header includes the application name and navigation links for 'Generate', 'History', and 'Settings'. The main content area is titled 'Settings & Configurations' and includes a subtitle 'Manage application parameters, AI model pricing, and conversion rates.' and a timestamp 'Last updated: 20/07/2026 05:21:52 pm (MYT)'. The settings are organized into three sections: 1. 'Currency Conversion' with a 'USD to MYR Exchange Rate' input field showing '1 US Dollar = RM 4.09' and an 'Auto Fetch Live Rate' button. 2. 'AI Model Pricing (USD)' with a 'Vision Model (GPT-4o)' section containing 'Input Price (per 1M tokens)' at '\$ 2.50' and 'Output Price (per 1M tokens)' at '\$ 10.00', and an 'LLM Model (GPT-4.1)' section with 'Input Price (per 1M tokens)' at '\$ 2.00' and 'Completion Price (per 1M tokens)' at '\$ 6.00'. 3. 'Azure Service Pricing (USD)' with a 'Content Understanding (per 1k pages)' input field at '\$ 5.00' and a note about the base extraction cost. Each section has an 'Official Pricing' link.

Section	Parameter	Value
Currency Conversion	USD to MYR Exchange Rate	1 US Dollar = RM 4.09
	Auto Fetch Live Rate	Button
AI Model Pricing (USD)	Vision Model (GPT-4o) Input Price (per 1M tokens)	\$ 2.50
	Vision Model (GPT-4o) Output Price (per 1M tokens)	\$ 10.00
	LLM Model (GPT-4.1) Input Price (per 1M tokens)	\$ 2.00
	LLM Model (GPT-4.1) Completion Price (per 1M tokens)	\$ 6.00
Azure Service Pricing (USD)	Content Understanding (per 1k pages)	\$ 5.00

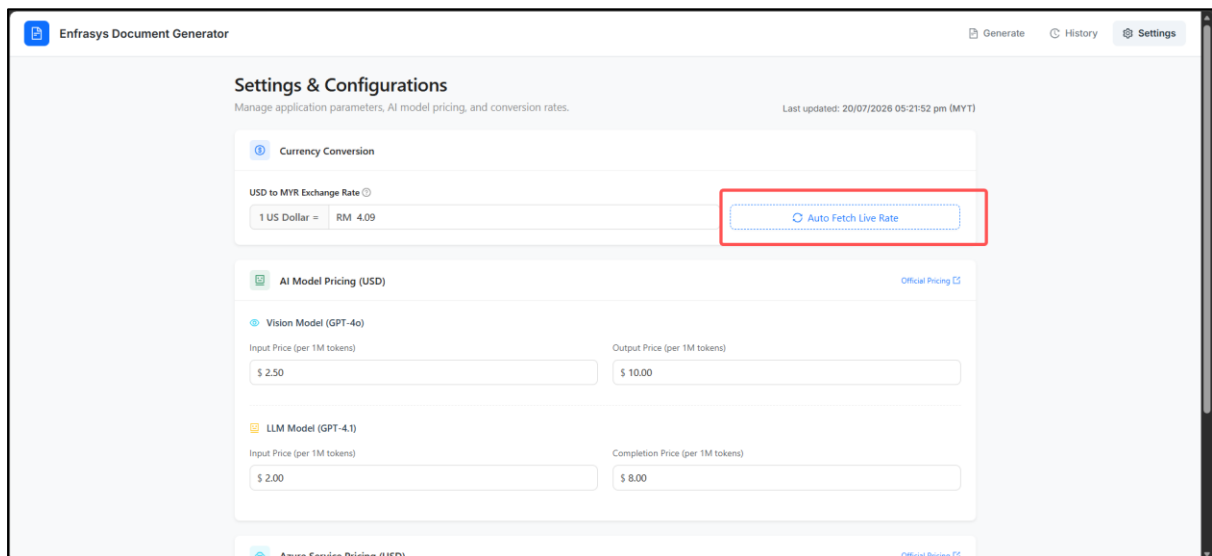

Step 2: Update the Conversion Rate from USD to MYR.

As the USD to MYR exchange rate changes periodically, the **Currency Conversion** section allows you to update the exchange rate used for cost calculations. You can manually enter the latest USD to MYR exchange rate in the provided input field.

The screenshot shows the 'Settings & Configurations' page of the Enfrasys Document Generator. The 'Currency Conversion' section is highlighted with a red box. It contains a label 'USD to MYR Exchange Rate ⓘ', a text input field with the value '1 US Dollar = RM 4.09', and a button labeled 'Auto Fetch Live Rate'. Below this, the 'AI Model Pricing (USD)' section is visible, showing input and output prices for Vision Model (GPT-4o) and LLM Model (GPT-4.1). The 'Azure Service Pricing (USD)' section is partially visible at the bottom.

Alternatively, click **Auto Fetch Live Rate** to automatically retrieve the latest exchange rate and populate the field without requiring manual input.

This screenshot is identical to the one above, showing the 'Settings & Configurations' page. However, the 'Auto Fetch Live Rate' button in the 'Currency Conversion' section is highlighted with a red box, indicating the alternative method to update the exchange rate.

Step 3: Update the AI Model Pricing and Azure Service Pricing (USD)

Microsoft AI model pricing may change over time as new pricing updates are introduced. The **AI Model Pricing (USD)** section allows you to update the pricing values used for cost estimation. As the application currently uses **GPT-4o** and **GPT-4.1**, you may update the corresponding input and output token pricing (per 1 million tokens) based on the latest Microsoft pricing.

The screenshot shows the 'Enfrasys Document Generator' settings page. The 'AI Model Pricing (USD)' section is highlighted with a red box. It contains two sub-sections: 'Vision Model (GPT-4o)' and 'LLM Model (GPT-4.1)'. Each sub-section has input and output price fields per 1M tokens. The 'Azure Service Pricing (USD)' section is also visible below.

Model	Input Price (per 1M tokens)	Output Price (per 1M tokens)
Vision Model (GPT-4o)	\$ 2.50	\$ 10.00
LLM Model (GPT-4.1)	\$ 2.00	\$ 8.00

To verify the latest Microsoft pricing, click **Official Pricing** to open the corresponding pricing page.

This screenshot is identical to the previous one, but with a red box highlighting the 'Official Pricing' link in the top right corner of the 'AI Model Pricing (USD)' section.

Azure service pricing may also change over time depending on Microsoft's pricing updates. The **Azure Service Pricing (USD)** section allows you to update the **Azure Content Understanding** pricing (per 1,000 pages) according to the latest published pricing.

Enfrasys Document Generator

GenerateHistorySettings

AI Model Pricing (USD)

Official Pricing

Vision Model (GPT-4o)

Input Price (per 1M tokens)

\$ 2.50

Output Price (per 1M tokens)

\$ 10.00

LLM Model (GPT-4.1)

Input Price (per 1M tokens)

\$ 2.00

Completion Price (per 1M tokens)

\$ 8.00

Azure Service Pricing (USD)

Official Pricing

Content Understanding (per 1k pages)

\$ 5.00

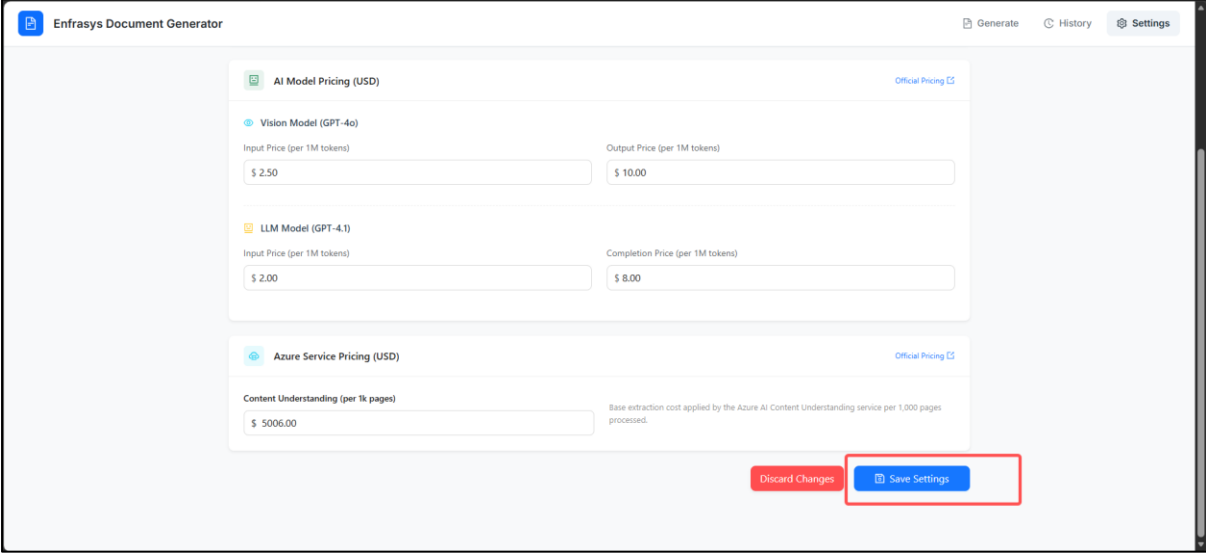

base extraction cost applied by the Azure AI Content Understanding service per 1,000 pages processed.

Discard Changes

Save Settings

Step 4: Save Changes or Discard Changes

After reviewing your changes, click **Save Settings** to apply and save the updated pricing configuration.

The screenshot shows the 'Settings' page of the 'Enfrasys Document Generator'. The page has a top navigation bar with 'Generate', 'History', and 'Settings' (active). The main content area is titled 'AI Model Pricing (USD)' and contains three sections: 'Vision Model (GPT-4o)', 'LLM Model (GPT-4.1)', and 'Azure Service Pricing (USD)'. Each section has input fields for pricing. The 'Save Settings' button is highlighted with a red box.

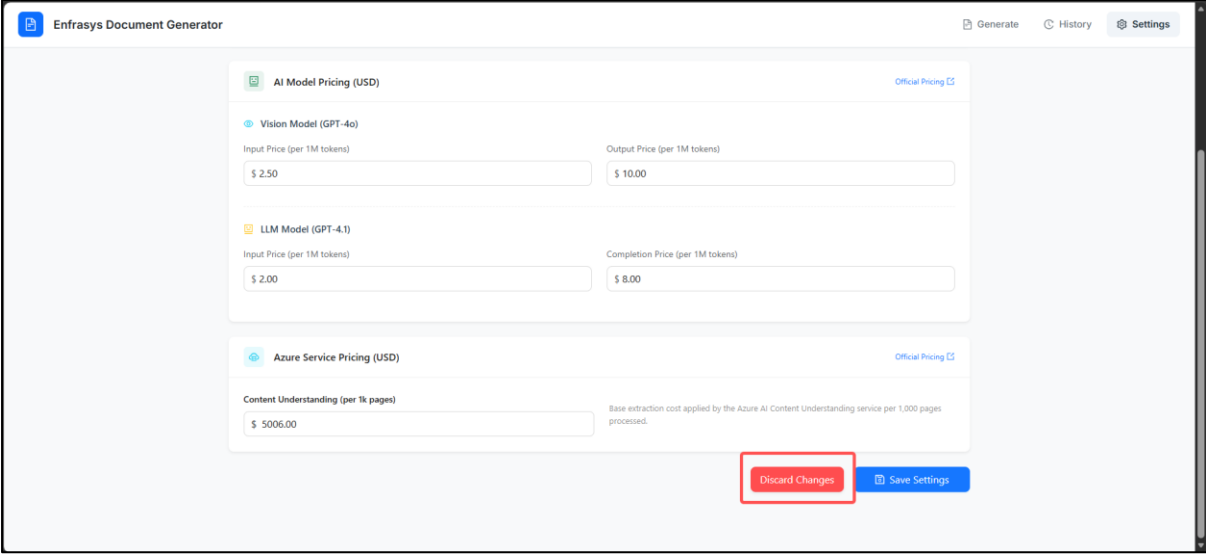

Model/Service	Input Price (per 1M tokens)	Output Price (per 1M tokens)	Completion Price (per 1M tokens)
Vision Model (GPT-4o)	\$ 2.50	\$ 10.00	
LLM Model (GPT-4.1)	\$ 2.00		\$ 8.00

Azure Service Pricing (USD)

Content Understanding (per 1k pages)	Base extraction cost applied by the Azure AI Content Understanding service per 1,000 pages processed.
\$ 5006.00	

[Discard Changes](#) [Save Settings](#)

To cancel any unsaved modifications, click **Discard Changes** to revert all settings to their previously saved values.

This screenshot is identical to the one above, showing the 'Settings' page of the 'Enfrasys Document Generator'. The 'Discard Changes' button is highlighted with a red box.

Model/Service	Input Price (per 1M tokens)	Output Price (per 1M tokens)	Completion Price (per 1M tokens)
Vision Model (GPT-4o)	\$ 2.50	\$ 10.00	
LLM Model (GPT-4.1)	\$ 2.00		\$ 8.00
